Write a Java Program, DisplayCountries that allows user to put in a language name as a String and have the program display a list of countries in the nation database where that language is either an official or an unofficial language.

```
MariaDB [nation]> SELECT name AS countries, language FROM countries c JOIN country_languages cl ON c.country_id=cl.count
ry_id JOIN languages l ON cl.language_id=l.language_id WHERE l.language='Dutch';
+----------------------+----------+
| countries            | language |
+----------------------+----------+
| Aruba                | Dutch    |
| Netherlands Antilles | Dutch    |
| Belgium              | Dutch    |
| Canada               | Dutch    |
| Netherlands          | Dutch    |
+----------------------+----------+
5 rows in set (0.038 sec)

MariaDB [nation]> |
```

Main.java DisplayCountries.java

```java
public class DisplayCountries {  1 usage
    public static void DisplayCountries(String language){  1 usage
        System.out.println("for nations database");
         String url = "jdbc:mariadb://localhost:3306/nation";
         String user = "phoenix";
         String password = "207191";
         System.out.println("Connecting to database...");
         try{
             Connection conn = DriverManager.getConnection(url, user, password);
             Statement stmt = conn.createStatement();
             System.out.println("Connection to MariaDB established successfully!");
             System.out.println("Country and Language");
             System.out.println("----------------");
//the SQL as a string
             String query = "SELECT name AS countries, language FROM countries c JOIN country_languages cl ON c.country_id=cl.country_id JOIN languages l ON cl.language_id=l.l
             ResultSet rs = stmt.executeQuery(query);
             while (rs.next()) {
                 System.out.print(rs.getString( columnLabel: "countries") + "-->" + rs.getString( columnLabel: "language")+"\n");
             }

             conn.close();
         }
         catch(SQLException e){
             System.out.println("failed");
             System.out.println(e);
         }

    }
}
```

```java
import java.util.Scanner;

public class Main {
    public static void main(String[] args) {

        Scanner sc = new Scanner(System.in);
        System.out.print("Enter Language: ");
        String language = sc.nextLine();
        System.out.println(" ");
        DisplayCountries.DisplayCountries(language);

    }
}
```

```
